

IN THE SPECIFICATION

Please replace the paragraph beginning at page 2, line 4 of the specification with the following replacement paragraph:

The present invention relates to a medicament cartridge for an injection device, such as a jet injector for delivering any liquid based medicament, even those that contain particulate or insoluble constituents. The medicament cartridge according to the present invention comprises a tube having first and second ends and a lumen with a longitudinal axis for retaining the medicament therein, a needle operatively associated with the second end of the tube and having a piercing end, a second stopper located within the lumen near the first end of the tube and moveable within the lumen along the longitudinal axis, and a first stopper located within the lumen near the second end of the tubular member and moveable within the lumen along the longitudinal axis and covering the piercing end of the needle. Relative movement between the first stopper and the second stopper compresses the medicament and relative movement between the first stopper and the needle pierces the first stopper to create a fluid pathway for the medicament through the needle.
